

Why Inspect?

You've found the property. Now you need an objective, qualified inspection of the home's structural and mechanical elements.

An inspection will identify fixable problems, which helps enable the purchase of your "dream home".

Our inspection allows you to see the house through the eyes of a professional who has extensive knowledge of home construction.

The Inspection

Clients are always encouraged to be present during the inspection. Your inspector, George Schambach, will first greet you and outline the process. You will then accompany him through the various parts of the house as he does his examination.

He will explain his findings as you go, and you are free to ask questions at any point.

The inspection process typically takes at least 3 hours. Clients experience the inspection as both educational and clarifying.

We will always strive to accommodate your schedule, including week-end inspections.

The Report

Within a minimum of three to five business days, your comprehensive report will be e-mailed to you.

You can also access it at our secure website by using a unique password that will be issued to you.

The report will consist of both a summary and an illustrated, detailed explanation of the various system components.

To view a sample report, visit
